Absolute Maximum Ratings

Stresses beyond the limits listed below may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Sustaining voltage A to K	-0.3V to 88V
Sustaining voltage CS, MS1, MS2 to K.....	-0.3V to 1V
Regulating current	150mA
Maximum operating junction temperature, T_J	165°C
Storage temperature range	-55°C to 150°C

NOTE:

1. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.
2. All parameters having Min/Max specifications are guaranteed. Typical values are for reference purpose only.
3. Unless otherwise noted, all tests are pulsed tests at the specified temperature, therefore: $T_J = T_C = T_A$.

Regulating current (with adequate heat sinking) ⁽¹⁾ , I_{AK}	130mA
Input voltage ⁽¹⁾ , V_{AK}	3V to 80V
Maximum junction temperature, T_J	150°C
Operating free-air temperature range, T_A	-40°C to 100°C

NOTE:

1. Due to thermal dissipation consideration, the maximum LED V_f in parallel should decrease with the regulating current.

NOTES:

- For ADJ option, the regulating current is determined by an external resistor, R_{EXT} , connected between the CS pin and the K pin. The mode selection function will not change the current ratio of option ADJ. To activate the line regulation function, the chip (U3) connected in series with the LED string should be set in Mode 0 (MS1 and MS2 connected to pin K). The regulating current will be: $I_{PEAK} = 0.27/R_{EXT}$

And the maximum regulating current of second step (ex: U2 in Mode 1) should not exceed 80% of the top level (ex: U3 in Mode 0), otherwise the circuit operation might become abnormal when OTP function is activated. It is strongly recommended to set at 75%.

Electrical Characteristics (Continued)

NOTES: (Continued)

2. The user can add an external resistor R_{EXT} between the CS pin and the K pin of U3 (Mode 0, serial connected to the LED string) to increase the regulating current of option C1, C2, C3, D1, D2 and D3, as shown in below. For U1 ~ U2 (Mode 1 ~ Mode 3, parallel connected to the LED string), adding an external resistor R_{EXT} between the CS pin and the K pin may cause abnormal operation and chip damage.

For option C1/ C2/ C3, the regulating current variation $\Delta I_{PEAK}/I_{PEAK} = 6.25/R_{EXT}$.

For option D1/ D2/ D3, the regulating current variation $\Delta I_{PEAK}/I_{PEAK} = 3.13/R_{EXT}$.

Option D1	80	82.5
Option D2	132	136.1
Option D3	104	107.3

Figure 3. External Resistor to Increase Regulating Current

3. The Regulating Current Line Regulation is defined as:

$$\text{For Mode 1~3: } \Delta I_{LR}/I_{PEAKx} = \frac{I_{AK}(V_{AK}=40V) - I_{AK}(V_{AK}=5V)}{I_{AK}(V_{AK}=5V)}, x = 1 \sim 3$$

$$\text{For Mode 0: } \Delta I_{LR}/I_{PEAK0} = \frac{I_{AK}(V_{AK}=40V) - I_{AK}(V_{AK}=5V)}{I_{AK}(V_{AK}=5V)}$$

4. The CS Pin Voltage Line Regulation is defined as:

$$\text{For Mode 1~3: } \Delta V_{LR}/V_{CS} = \frac{V_{CS}(V_{AK}=40V) - V_{CS}(V_{AK}=5V)}{V_{CS}(V_{AK}=5V)}$$

$$\text{For Mode 0: } \Delta V_{LR}/V_{CS} = \frac{V_{CS}(V_{AK}=40V) - V_{CS}(V_{AK}=5V)}{V_{CS}(V_{AK}=5V)}$$

5. Dropout voltage = $V_{AK} @ 90\% \times (I_{PEAK0} @ V_{AK} = 5V)$

6. When $T_J > T_{TP}$, the peak regulating current decreases linearly to around 50% at 175°C.
